

# Customers Page Brief

- We're looking for a **creative approach** to redesign one of our existing pages: the [Customers page](#). We've truncated the full content so it's not that long for the scope of this test.
- The target outcome of this test is for you to deliver a **static or dynamic HTML/CSS/JS version of the page whose content is described below**, and make sure it's standards-compliant, valid, semantic, well-formed, responsive, and fast loading, to the best of your ability in the allotted time. The project should be **stored in a GitHub project** and its link should be **emailed** to [viorel.mocanu@pentest-tools.com](mailto:viorel.mocanu@pentest-tools.com) upon completion, at your earliest convenience.
- Using additional technologies is entirely optional. If you'll be using a JS framework (for example Vue or React) or server-side technology (like PHP or something else), please **build it for production so it's static** and testable without installing the server for it, if possible. Or, if you choose not to build it for production, you should attempt to **deploy it using [GitHub Pages](#)** or Netlify, or any other such host.
- The page design can be made any way you like. It can be simplified or enhanced as per your intuition and desire. The general layout of the page could be inspired by our [Customers page](#), but as stated above, that's just a starting point, you can **use your creativity** as far as the layout and design go – you could just realign some elements or you could build something completely new. Just note that the design you deliver for this page may differ from what we normally use as layout and typography across any of the pages of our website, as long as you **keep the color scheme similar** to what we have.
- You may use the existing CSS and HTML structure of our website as a starting point if you wish, and if that helps deliver the page faster.
- The tags and comments in **yellow** below are for development, SEO, and design purposes, they shouldn't be included in the live page verbatim.
- Please make sure to include the **SEO elements** located at the end of the brief.
- The minimum functionality for the listing of clients is: **sorting by relevance, sorting by alphabetical order, filtering by country, filtering by industry**. The default options are ones that allow all clients to be visible initially (sorting by relevance descending, country = All, industry = All).
- As a special requirement, you should attempt to get the logos of the companies below from their websites or elsewhere on the Internet, but we suggest finding them in **vector format**, not raster.
- We will be **testing your submission** with multiple code validators, speed checkers, code quality checkers, and other 3rd party tools, and the results will inform our decision. But the bulk of the grade will consist of: **how well the code is structured and tailored for the current page exclusively, and how good the page looks and feels to use on resolutions from 320px to 2560px wide**.
- If you have any **questions**, feel free to write to me on email or LinkedIn.

Good luck!

**Name:** U.S. Department of Commerce  
**Industry:** Gov & Public Sector  
**Country:** United States of America  
**Relevance:** 10

## H2 What our customers say about Pentest-Tools.com

Please use the [Review structured data](#) defined in [greater detail in Schema.org](#) for this page, rating 4.5 and 5 stars randomly. Also feel free to use other structured data liberally (like Company, Person, Website, etc).

Ioan Constantin

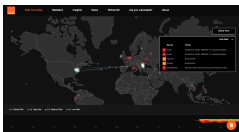

Cyber Security Expert, Orange | Industry: telecom

**Likes it for:** ease of use, great reporting capabilities

*"We teamed up with Pentest-Tools.com nearly 3 years ago and offered their great Web Vulnerability Assessment tools in our [threatmap.ro](#) (external link, to be opened in new tab) platform, offering free, one-click quick scans for our user base.*

*We absolutely loved the experience, so far :) and appreciate the great collaboration with their team and how easy it is to work with them in demanding projects such as Threatmap. [Read the full review >](#)*

*Having access to a well-documented API was key for the successful integration of Threatmap and Pentest-Tools.com and the girls and guys over there delivered a great API, were prompt in answering our feedback and supporting our needs for some over-the-top custom integration requirements.*

*We're pushing forward with new iterations of Threatmap, new use-cases and as we expand our user-base, Pentest-Tools.com remains one of the core tools we're using to push forward innovation, awareness and technology."*
